

**SEMPRIX
PRESENTS
ROOTCON 11**

ROOTCON

September 21-22, 2017

@

**Taal Vista Hotel
Tagaytay**

QUICK GUIDE

MESSAGE FROM SEMPRIX

“Since I started ROOTCON back in 2008, the goal of ROOTCON to provide high-quality yet a fun conference has never shifted, we maintained that goal throughout the years in organizing the event. Each year we always find new and exciting stuffs to introduce to our con-goers. Last year the chill-out area and the dedicated Capture The Flag spot was a huge success. This year will not be different from the rest, new additions to the conference are brewing. So with this, I would like to personally invite you to witness another knowledge-fun-filled hacking conference.”

All The Best,
-semprix

ABOUT ROOTCON

ROOTCON is known for its high-caliber technical speakers, contest quality, and affordability. We have been able to bring to the Philippines sought-after and credible speakers that other groups have not been able to get. At the same time, we have been successful in keeping access to the conference affordable for the hacking community. This balance between content and affordability is the reason ROOTCON has been consistently a huge success.

WHAT'S NEW

Each year ROOTCON keeps on brewing new, exciting and great things for the conference, this year we added some awesome sauce to the mix. Here are some cool things to look forward.

DAY 1 EXTENDED - we will be extending our Day 1 activities up until 11:00PM or 12:00AM. Day 1 will host several hacking games, movie night, parties, and the night tracks. Prepare the energy drinks please...

NIGHT TRACKS - what is a night tracks? A night tracks is a never before seen or heard presentation, the presentation on Night Tracks will be focused on cutting-edge research, zer0-day presentation, or a unique IoT vulnerability discovery.

INFOSEC ROCKSTARS - This year two known and respected personalities will be at ROOTCON 11, Jayson Street and Jason Haddix will be joining us.

HACKERS DEPOT - have tools to showcase? Or just want to know the latest tools-of-trade hackers use, visit the "Hackers Depot" area.

WHY SHOULD I ATTEND?

There are thousands of reasons why you should be attending a hacking conference, but these we thought are essentials.

SECURITY AWARENESS - Gain Security awareness in knowing the latest trends in Information Security.

COMPETITIVENESS - Enhance technical skills and capabilities through the demos and action pack activities.

SOCIAL NETWORK - Get to meet known and respected personalities in the Information Security industry, widen your network of professionals.

COMPANY REPUTATION - the hacking community has the largest population in the Information Security industry, joining and supporting the hacking community will gain your company a reputation from the elites.

CONFERENCE AT A GLANCE

Target Attendees - 200 to 300

Target Audience

Security Administrators
CIOs and IS Management
Security Analysts
Network Administrators
Security Managers
Security Engineers
Security Monitoring Engineers /
Analysts
Security Officers
System Programmers
Network Analysts
System Administrators and
Analysts
Cyber Crime Investigators
IT Professionals
Programmers
Students, Faculties and School
Directors / Administrators

**2 DAY
CONFERENCE**

12 Talks
4 Trainings
4 Tracks
3 Contests

SPEAKERS

ROOTCON is an internationally recognized hacking conference, known personalities in the hacking community has submitted their research and presented at the conference

Complete list can be found at: <https://www.rootcon.org/xml/rc11/speakers>

Jason Haddix

Jason is the Director of Technical Operations at Bugcrowd. Jason trains and works with internal analysts to triage and validate hardcore vulnerabilities in mobile, web, and IoT applications/devices.

Jayson E. Street

Jayson E. Street is an author of Dissecting the hack: series. Jayson is also the DEF CON Groups Global Coordinator. He has also spoken at DEF CON, ShowMeCon, UCON and at several other CONs and colleges on a variety of Information Security subjects.

Christopher Elisan

Christopher Elisan is a seasoned reverse engineer and malware researcher. He is currently the Principal Malware Scientist at RSA. He has a long history of digital threat and malware expertise, reversing, research and product development.

TALKS

Talks at ROOTCON are carefully deliberated through the Call For Papers, talks submitted are reviewed by the ROOTCON CFP Review Board.

Complete list can be found at: <https://www.rootcon.org/xml/rc11/talks>

7 sins of ATM protection against logical attacks

Everyone is perfectly familiar with logical and black-box attacks on ATMs. But hardly any countermeasures have been taken so far: banks are sure that their devices are perfectly protected, until hackers prove them wrong. The most frequent reason why this happens is developers, engineers, and security staff' lack of expertise: they have a vague idea on attacks sources and vectors and what they should monitor and improve. In this presentation, we'll discuss in detail how exactly hackers break into ATMs and bypass security measures to make machines spit out all the money

Drone Hijacking and other IoT hacking with GNU Radio and SDR

Internet of things is surrounding us. Is it secure? Or does its security stand on (deemed) invisibility? SDR (Software-defined radio) and GNU Radio can answer these questions. In this presentation, we will play some modern wireless devices. They have similar protocols, and none of them encrypts its traffic. We will show how easy it is to find them using SDR and proprietary chipsets, and how to sniff/intercept/fuzz these devices using a small python script and GNU Radio. As an example we will show a Mousejack attack to wireless dongles, wireless keyboard keylogger and even a drone hijacking.

The future of ApplePwn. How to save your money.

It was obvious that this attack was possible by default: if the phone is jailbroken, then it's possible to steal the money, but for some reason everyone claimed about the opposite, considering "Apple Pay is the Most Secure Form of Payment". This is exactly what I would like to refute, considering in detail the flaws of Apple Pay on the phone (payment in applications and the web).

TRAININGS

Trainings at ROOTCON are FREE when you sign-up for the conference.

Note: ROOTCON 11 Call For trainings on-going, this page will be updated accordingly. Trainings will be free-seating

Hacking 101

This training is a 4-hour training crafted by hackers for the upcoming hackers. The training will introduce you to the trade-crafts used by hackers, if you are shifting your career to InfoSec, just started your hacking career or just curious how hackers break-in to systems, then this training is for you.

An Introduction to Metasploit Exploit Dev

So you want to be a Metasploit contributor? Well, you are in the right track if you have been studying exploit development. But how do you port your FTP and Web RCE exploits to the framework? Join Jay as he demonstrates how easy it is done as long as you have inner peace.

Web Security 101

Another crafted training by hackers. Dive in into the basics of web security which will showcase common web application attacks as detailed by the OWASP (Open Web Application Security Project) Top 10 and basic web-fu skills in order to understand how hackers came to a website near you. This training will focus more on the offensive side. SQL Injection to backdoor shell? It will be presented manually!

SIGN ME UP

Fill-up the form if you need statement of account for company approval purposes OR register directly at
